

# CHG50/55 PNG Charger

The MP50 is powered by an internal rechargeable battery. For recharging AXNES offers two different charger types. Both chargers are cradle type chargers, one table charger for off aircraft use, the other one for airborne use.

### **CHG55 Airborne use charger:**

The airborne type charger is fitted with an easy to operate retaining clamp which ensures the transceiver is secured when in the charger during flight. Installed in the aircraft the charger will be supplied by the aircraft DC power. The airborne charger accepts a wide voltage supply range, from 12 to 33VDC. All buttons and features are available when charging, allowing a charging MP50 to be used as audio station on the ICS.

### **CHG50 Standard table charger:**

The table charger has no retaining clamp and may be supplied stand alone or chained to supply multiple simultaneous charging positions. A chained table charger will support individual charge cycles for each MP50.

The table chargers are supplied with a universal power supply for 100 to 250VAC, 50 or 60Hz, and power cords for any national standard.

## **Part Numbers and Variants:**

<b>Part Number</b>	<b>Description</b>
AXS-CHG-0100-N-C0	CHG50, Charger for MP50 ground use, Yellow
AXS-CHG-0100-N-C2	CHG50, Charger for MP50 ground use, Green
AXS-CHG-0100-N-C3	CHG50, Charger for MP50 ground use, Black
AXS-CHG-0150-N-C0	CHG55, Charger for MP50 airborne use, Yellow
AXS-CHG-0150-N-C2	CHG55, Charger for MP50 airborne use, Green
AXS-CHG-0150-N-C3	CHG55, Charger for MP50 airborne use, Black
